

Product Description

Abesco Fire Rated Mortar is designed to maintain the fire resistance of compartment walls and floors.

Abesco Fire Rated Mortar is a pre-mixed dry blend, consisting of inorganic fillers and foamed perlite. When mixed with water it produces a trowelable or pourable grade non-spalling, thermally insulating fire seal. Whilst curing, the mortar expands by approximately 1% ensuring a tight seal around penetrations and within the opening. Once installed Abesco Fire Rated Mortar sets within approximately 30 minutes allowing works to be completed without the need to re-visit the site.

Fire Rated Mortar Features:

- Expands slightly during cure
- Suitable for large or small irregular openings
- Easy to use
- Simple to retro-fit additional services
- Does not spall

Application

Abesco Fire Rated Mortar is particularly suitable for reinstating compartment floors where HVAC ducts, plastic pipes, and electrical services have been installed. Small irregular holes and imperfections of fit can easily be repaired using Abesco Fire Rated Mortar.

Physical Properties

Physical State:	Free flowing powder
Colour:	Off-white
Nominal Dry density:	Approximately 72 lb / cubic feet
Flash Point:	N/A
Solubility in water:	Approximately 1%

Specifications

All installations shall be in strict accordance with manufacturers printed instructions and shall be tested in accordance with ASTM E814 (UL1479) and classified by Underwriters Laboratories Inc.

Testing and Performance Data

Tested in Accordance with:

- ASTM E814 (UL1479)
- BS 476 part 20
- AS 1530 part 4
- EN1366-3
- SABS 0177 part 2
- NS EN 1363-1

UL Classified 1 and 2 Hour rating

Installation Methods

- 1 Ensure all service penetrations are complete and installed to the manufacturers recommendations
- 2 Remove dust and debris by brushing out the opening and surrounding area
- 3 Friction fit 2" thick mineral fiber batt shutter within the thickness of the floor. To ensure a good seal, Abesco CP310 FR Intumescent Acrylic Mastic can be applied to all joints in the mineral fibre. A temporary timber shutter can be used in place of the permanent mineral fiber, but this should be removed once the seal is cured.
- 4 Pour clean potable water into a suitable mixing vessel and add sufficient dry FR Mortar to achieve the required consistency, stirring the slurry to remove all lumps. The normal mixing ratios are:
 - 2.5 parts FR Mortar : 1 part Water Pourable mix
 - 3 parts FR Mortar : 1 part Water Trowelable mix
 - 4 parts FR Mortar : 1 part Water Hand Batch mix

IMPORTANT: ALWAYS ADD THE DRY POWDER TO THE WATER

- 5 Pour or trowel apply the mix onto the mineral fiber shutter, and build up to the required thickness with further applications (if required).
- 6 Abesco FR Mortar normally sets within approximately 30 mins (dependent on environmental conditions). To achieve a full cure can take up to approx. 28 days.

Typical Installations

Metallic Pipe through Concrete Floor

Cables through Concrete Floor

Plastic Pipe through Concrete Floor
